Enterprise Cryptographic Discovery & Analysis Tool

[Prototype demo video](#)

THE PROBLEM

Organisations suffering to **discover & catalog** cryptographic asset & hashes, ciphers remain untracked

Quantum computers threaten Legacy encryptions.

Attackers find encrypted data today to **decrypt later**.

PROPOSED SOLUTION

Automated AST-based scanning via Semgrep custom rulesets

Auto-generates CycloneDX 1.6 CBOMs (Cryptographic Bill of Materials)

Applies Mosca's Theorem risk scoring:
 $X + Y > Z$

1 Source Code Repositories

2 AST Scan with Semgrep

3 Findings Extraction

4 Risk Scoring (Mosca's Theorem)

5 CBOM Generation (CycloneDX 1.6)

6 Actionable Output
